

Information Update from Department of Health

Swine Flu – Monday 29 June 3pm

1,604 further patients under investigation in England have been confirmed through laboratory testing with swine flu since the last update on Friday June 26 2009.

Together with the 72 laboratory confirmed cases in Scotland reported on Friday (June 26 2009) by the Scottish Government, six laboratory confirmed cases in Northern Ireland announced by the Northern Ireland Executive (one on Friday June 26 and five earlier today) and five laboratory confirmed cases in Wales announced by the National Public Health Service for Wales and the Welsh Assembly Government (one on Saturday June 27 and four on Sunday June 28), this brings the total number of laboratory confirmed UK cases identified since April 2009 to 5,937.

A Department of Health spokesperson said:

"The cases of swine flu found in the UK have so far been generally mild in most people, but are proving to be severe in a small minority of cases.

"We are continuing to work to slow the spread of the disease in the majority of the UK, but we are allowing a more flexible outbreak management approach in areas where more community transmission has taken place. Here, it makes sense to move beyond extensive swabbing and all contact tracing. Instead, we are asking the local NHS to focus on individuals who have symptoms.

"The UK continues to be well-placed to deal with this new infection."

Further Information

If you have flu like symptoms and are concerned, stay at home, if you can go online check your symptoms on the symptom checker on www.nhs.uk or call the swine flu information line on 0800 1 513 513. If you have taken these steps and are still concerned call your GP or NHS Direct.
